Wolters Kluwer Health Releases *Integrated Facts & Comparisons*

Now Access Referential Drug Information within the Pharmacist's Workflow

ST. LOUIS (March 19, 2007) - Wolters Kluwer Health today announced the introduction of *Integrated Facts & Comparisons*. Combining data from its leading drug information resource, *Drug Facts and Comparisons*®, and combining it with its Medi-Span® integrated software, Wolters Kluwer Health has created a product that enables pharmacists to access referential drug information within their workflow.

"This is the first true hybrid of its kind," stated Mark Millikan, PharmD, Senior Director of Drug Information Product Management at Wolters Kluwer Health. "A software that provides pharmacists with immediate access to essential referential drug data without leaving their workflow, which means more time where they are needed most - with their patients."

Integrated Facts & Comparisons seamlessly integrates monographs into the pharmacy workflow. No longer will pharmacists need to login and logout to access drug information. They can bypass searching and multiple clicks, retrieve route-specific drug information, access brand and package-specific content and customize the display of information based on their needs.

A pharmacist doesn't need to be a Medi-Span customer to enjoy the benefits of *Integrated Facts & Comparisons*. It can be linked to multiple drug concepts including National Drug Code (NDC), Medi-Span's Dispensable Drug Identifier (DDID), Medi-Span's Drug Name Identifier (DNID) and Medi-Span's Routed Drug Name Identifier (RDID).

Integrated Facts & Comparisons is an ideal companion to *Facts & Comparisons 4.0*, the electronic library healthcare professionals depend on for complete drug information. For those occasions when a broader, more interactive search is needed, *Facts & Comparisons 4.0* is accessible via the Internet or available via CD-ROM for intranet or desktop applications.

"This is another example of Wolters Kluwer Health's commitment to respond to the needs of our customers by providing them access to the quality drug information they need to ensure patient safety," said Millikan.
