

# Adverse Drug Effects Database™

Protects Patient Health by Identifying Adverse Drug Effects Quickly

## SIMPLIFIES DECISION MAKING

Adverse Drugs Effects Database™ equips health care providers with a decision support tool that helps them quickly identify and monitor adverse drug effects and, when necessary, speed corrective action. This database reports the adverse effects attributed to each drug, including their frequency and severity.

## MEETS HEALTH CARE PROVIDERS' NEEDS

- **Satisfies** Joint Commission requirements for monitoring and reporting adverse drug effects by proactively alerting practitioners
- **Provides** direct access to adverse drug effects information, fulfilling Medicare Conditions for Participation
- **Facilitates** review of adverse drug effects by clinicians prior to prescribing

# Adverse Drug Effects Database™

## INCLUDES:

- Incidence level – describes the frequency of adverse effects
- Severity level – rates the potential of the adverse effects to cause harm
- Documentation level – rates the quality of medical literature that documents each drug's adverse effects
- Restriction condition – describes patient populations and medical condition where the adverse effects are known only to occur
- Special condition – provides information on patient populations or medical conditions especially prone to the adverse effects

## BENEFITS

- *Expedites corrective action by identifying adverse drug effects*
- *Increases productivity by eliminating manual retrieval of adverse drug effects information*
- *Reduces patient and institutional costs by preventing hospitalizations, physician visits and lab tests associated with adverse effects*

## REQUIRED COMPANION PRODUCT:

- *Medical Conditions Master Database™*
