

Parameters to Monitor Database™

Ensures Proper Drug Monitoring

MONITORS DRUG THERAPY EFFECTIVENESS

Parameters to Monitor Database™ equips health care providers with the recommended procedures, lab tests and physical assessments to be performed or reviewed during drug therapy. With proactive monitoring, patients' therapeutic outcomes can be measured and adverse drug effects can be identified.

MEETS HEALTH CARE PROVIDERS' NEEDS

- **Generates** alerts when lab tests should be ordered or when procedures or assessments need to be performed
- **Equips** doctors with decision support information for drug selection and patient counseling
- **Supports** caregivers in monitoring drug therapy on an ongoing basis

Parameters to Monitor Database™

INCLUDES:

- Recommended lab tests, physical assessments, panels and diagnostic procedures, including initial timing, frequency and duration
- Restrictions that describe a patient population or medical condition to which that parameter only applies
- Special conditions that provide information about a patient population or medical condition to which that parameter especially applies
- Monitoring "protocols" specific to the general population or the long-term care facility

BENEFITS

- *Reduces adverse drug effects by proper monitoring of drug therapy*
- *Reduces liability risk by properly monitoring patients*
- *Improves efficiency by proactively identifying recommended lab tests and procedures*

REQUIRED COMPANION PRODUCTS:

- *Medical Conditions Master Database™*
- *Master Parameters Database™*
